The first step in any Engineering design project is to brainstorm! Engineers always work as a team, and team work is very important. In this part of the project, the team thinks of what they want to do for the project. Projects will be given to a boss, also known as a client once they write a report.

Next, the engineers will write a report as a team. This report explains what the project is and how they want to design it. Basically, this is to try to get the boss to say yes to their project.

Once the engineers are done with the report, they give it to the boss. The boss will then see if the engineers plan is good. The engineers wait until they get the thumbs up to build their project.

WALA! The boss likes the project and gives the team the thumbs up to start building the project! The team is happy that their hard work has paid off and go on to the next step.

After getting the thumbs up, the construction of the project begins. In this case it is a tall building for the boss. The team works together to get the work done.

Finally the building is finished, and the boss is happy. The team manager shakes the bosses' hand, as they both admire the building. Now, every time the engineer passes by the building. He can say he was a part of the team who built it. THE END.
